

Robotics Club Planning Document

Brief

Whilst running my school's robotics club, I needed to share ideas and scheduling often with teachers. So, I used a "masterdoc" such as this one that I edited every week using Google Docs, and shared it with all relevant parties who needed access. That way, I didn't need to be updating multiple documents or telling multiple people in person what we would be doing each week, etc.

Please note, examples will be coloured green like this.

A blank template will be available within the same subfolder.

Plans:

I used the 'Plans' section mostly for rough ideas or notes.

- Perhaps consider microbit to do with coding club (unsure, discuss with members)
- Potentially plan to cover some engineering topics (eg. CAD modeling)

Parts to Order:

Sort of self explanatory, but relevant links and notes about parts or kits to order were put under this section.

- Look up ultrasonic robot parts lists and see what is feasible within budget
- Microbit club kits, including 10 microbit bbc v2s (usually around £150 - £180)

Lessons

Quick bullet points that could be crossed off when a lesson was completed.

- ☒ Transistors
- ☒ LEDs
- ☐ Resistors recap
- ☐ Op-amps
- ☒ Ultrasonic sensors
- ☒ Servos
- ☒ LCD screens
- ☐ Motors

Schedule:

This section was used to plan by term, though it could be adapted for trimesters, etc. Note that I only ran one session per week, as seen in the example.

Term 3

Date	Lesson #	Topic
29/01/25	#6	Ultrasonic sensors
05/02/25	#7	LCD screens
11/02/25	#8	Motors (?)

Term 4:

Date	Lesson #	Topic
05/03/25	#8	Preparing to make robot
12/03/25	#9	Fixing errors + continuation of making
19/03/25	#10 or n/a	Start on robot (?) – if they haven't been delivered do motors
26/03/25	n/a	Start/continue robot
02/03/25	n/a	Continue robot + present next term lesson plans (i.e. switch to alternating coding weeks + some CAD-ing/3D modeling
